

WHAT IS CLAIMED IS:

1. A method for providing a personal site, comprising:
generating a personal site having an address, wherein the personal site has an associated first view and an associated second view; and
navigating a user to the personal site, wherein the user is navigated to the address and presented with at least one of the first view and the second view depending on the identity of the user.
2. The method of Claim 1, wherein the first view corresponds to a private view and the second view corresponds to a public view.
3. The method of Claim 2, wherein the user is navigated to the private view when the user corresponds to an owner with relation to the personal site.
4. The method of Claim 1, wherein generating the personal site further comprises providing the user with a selection for generating the personal site.
5. The method of Claim 1, wherein generating the personal site further comprises determining whether the user has permission to generate the personal site.
6. The method of Claim 5, wherein generating the personal site further comprises redirecting the user to a general site when the user does not have permission to generate the personal site.
7. The method of Claim 1, wherein generating the personal site further comprises determining whether another personal site already exists that is associated with the user.

8. The method of Claim 7, wherein generating the personal site further comprises redirecting the user to the other personal site when the other personal site does already exist.

9. The method of Claim 1, wherein navigating to the personal site further comprises comparing an identity of an owner associated with the personal site to the identity of the user.

10. The method of Claim 9, wherein the user is navigated to the first view when the identity of the owner and the identity of the user are the same, and the user is navigated to the second view when the identity of the owner and the identity of the user are different.

11. A system for providing personal sites, comprising:
a server including a network communication device coupled to a network and a data store, and a personal site application configured to perform actions, including:
generating a personal site having an address, wherein the personal site has an associated first view and an associated second view; and
navigating a user to the personal site, wherein the user is navigated to the address and presented with at least one of the first view and the second view depending on the identity of the user.

12. The system of Claim 11, wherein generating the personal site further comprises determining whether the user has permission to generate the personal site.

13. The system of Claim 12, wherein generating the personal site further comprises presenting the user with an error message when the user does not have permission to generate the personal site.

14. The system of Claim 11, wherein generating the personal site further comprises determining whether another personal site already exists that is associated with the user.

15. The system of Claim 14, wherein generating the personal site further comprises redirecting the user to the other personal site when the other personal site does already exist.

16. The system of Claim 11, wherein navigating to the personal site further comprises comparing an identity of an owner associated with the personal site to the identity of the user.

17. The system of Claim 16, wherein the user is navigated to the first view when the identity of the owner and the identity of the user are the same, and the user is navigated to the second view when the identity of the owner and the identity of the user are different.

18. The system of Claim 11, further comprising setting the personal site as a default save location for resources generated by an owner associated with the personal site.

19. A method for generating a personal site, comprising:
determining whether a user has permission to generate the personal site;
determining whether the personal site already exists; and
creating the personal site when the user has permission to generate the personal site and the personal site does not already exist.

20. The method of Claim 19, wherein creating the personal site further comprises calling a personal site provisioning code.

21. The method of Claim 19, wherein creating the personal site further comprises redirecting the user to the personal site after the personal site is created.

22. A method for navigating to a personal site, comprising:
determining a user identity associated with a user navigating to the personal site;
determining an owner identity associated with an owner of the personal site to which the user is navigating;
comparing the user identity to the owner identity;
redirecting the user to a first view associated with the personal site when the user identity and the owner identity are the same; and
redirecting the user to a second view associated with the personal site when the user identity and the owner identity are different.

23. The method of Claim 22, wherein the first view corresponds to a private view and the second view corresponds to a public view.

24. The method of Claim 22, wherein at least one section contained within the personal site is different depending on the user identity.

25. A method for setting a personal site as the designated personal site associated with a particular user, comprising:
initiating code to set the personal site as the designated personal site; and
running a security check to authenticate the setting of the personal site as the default save location.

26. The method of claim 26, further comprising updating an directory system with the location of the personal site.
